

Rotosteam steam cover

"Lightweight steam foil and accessories"

- Lightweight
- Easy to move
- Less bulging
- Lies steady on the ground
- Guaranteed life-time of 200 hours
- Thickness of 0.15 mm
- Each size available

Rotosteam foil

The weight of the steam foil determines to a large extent the physical demands of the steam work. Since 1987 Brinkman provides the ROTOSTEAM steam foil. The most striking advantage of this steam foil is the weight which is only 150 grams per square meter. This is about one third of a PVC steam foil. ROTOSTEAM is very tough, so that there is a little chance of stretching. Because of this, the condensation and energy losses are minimal and the steam foil stays in position better.

Steam insulation foil PH 98-FP(Fire Protected)

The steam insulation foil, on one side black and on the other aluminum, provides an efficient higher soil temperature during the steaming of 11%. It is possible to prevent 10-15%. With the same amount of energy, there is more heat in the soil. Also it gives the employees which are working in the vicinity of the steam foil better working conditions.

The heat water hoses

The lightweight steam hose is a labour-friendly alternative for the heavy steam chains and steam bags. The rubber steam hose is made from a black rubber inner tube with a diameter of 125 mm. The hose when filled with approximately 10 liters of water per meter can easily be rolled up after use.

The Brinkman steam hose is available in the exact desired length.
Article number: 954004530

Warning: Do not wind the steam hose between the steam foil while the steam hose is still hot

Steam foil reel

To reduce the load of winding the steam foil Brinkman provides a steam foil reel. The electrically powered steam foil reel is designed to unwind and rewind the steam foil. This steam foil reel is suitable for steam foils in a span width of: 6.40, 8.00 and 9.60 meters.

Steam foil reel 9.60 meter
Steam foil reel 8.00 meter
Steam foil reel 6.40 meter
